REGIONAL CARBON SEQUESTRATION PARTNERSHIP PROGRAM

PCOR PARTNERSHIP

2003–2005 – PCOR Partnership: Characterization

2005–2008 – PCOR Partnership: Field Validation

2007–2019 – PCOR Partnership: Commercial Demonstration

2019–2024 – PCOR Partnership Initiative: Commercial Deployment

PCOR PARTNERSHIP 2003-PRESENT

The PCOR Partnership Initiative addresses regional capture, transport, use, and storage challenges facing commercial CCUS deployment. The Initiative focuses on:

- Strengthening the technical foundation for geologic CO₂ storage and enhanced oil recovery (EOR).
- Advancing capture technology.
- Improving application of monitoring technologies.
- Promoting integration between capture, transportation, use, and storage industries.
- Facilitating regulatory frameworks.
- Providing scientific support to policy makers.
- Enabling and advancing deployment of CCUS.

Our Partners inform our priorities.

Carbon Capture and Storage (CCS)

CO₂ Capture, Transport, and Injection

1. Capture CO_2 instead of emitting to atmosphere.

CO₂ Source

FRESH WATER

2. Compress CO₂ for optimal transport and storage.

- 3. Transport CO_2 to injection site.
- 4. Inject CO_2 for permanent geologic storage.

CO₂ Plume

Image Credit: Energy & Environmental Research Center

5900 feet

CO₂ CAN BE MANAGED

GEOLOGIC STORAGE OF CARBON DIOXIDE

CRITICAL SUBSURFACE CHARACTERISTICS

- Depth
- Porosity/permeability
- Good cap rock
- Appropriate salinity
- No natural leakage pathways

Depth

- Below approximately 2600 ft, CO₂ becomes a supercritical fluid.
- CO₂ will behave like a liquid.
- High density of the CO₂ allows for more storage in a given volume.

POROSITY AND PERMEABILITY

REGIONAL SOURCES AND **SEDIMENTARY BASINS**

INCENTIVES

TRANSPORTATION

45Q Tax Credits

MINING

• Projects beginning construction before January 1, 2033, can claim credits for 12 years after operations begin.

CO. CAPTURE

- Provides for direct payment for 45Q credits.
- Tax credit for CO₂ stored in a qualified EOR project: \$60/tonne.
 - Tax credit from direct air capture (DAC): \$130/tonne.
- Tax credit for CO₂ stored in a saline formation: \$85/tonne.
 - Tax credit from DAC: \$180/tonne.

West Coast LCFS Markets

- Credits trading up to \$80–\$220 per ton (June 2021–2022).
- Stacked with 45Q.

North Dakota Incentives

- No sales tax on capture-related infrastructure.
- No sales tax on CO₂ sold for EOR.
- No sales tax on construction of pipeline.
- Property tax-exempt for 10 years (equipment).
- Coal conversion tax: tax reduction with CO₂ capture (up to 50%).
- No sales tax on CO_2 EOR infrastructure.
- 0% extraction tax for 20 years for CO₂ EOR.

COMPRESSION/ RECYCLING

ASSOCIATED CO. STORAGE

REGULATING **GEOLOGIC STORAGE OF CARBON DIOXIDE**

POLICY AND REGULATORY DEVELOPMENTS

- Pore space Law
- Long-term responsibility
- Class VI primacy
- Regulatory program implementation
- Pathways to permit approval
- Policy/regulatory barriers

Geologic Sequestration of Carbon Dioxide

Underground Injection Control (UIC) Program Class VI Well Construction

CLASS VI INJECTION WELLS

- Class designated for CO₂ injection wells as required by the U.S. Environmental Protection Agency (EPA) under the Safe Drinking Water Act.
- Material costs are increased over other well types (corrosion resistance, increased tensile/compressive strength, etc.).
- Injection target formation total dissolved solids (TDS) content cannot be less than 10,000 milligrams per liter.

UNDERGROUND INJECTION CONTROL (UIC) PROGRAM

UIC Program Standards:

- 1) Protection of underground sources of drinking water (USDWs)
- 2) Injection zone
- 3) Confining zones (upper and lower)
- 4) AOR and corrective action
- 5) Wellbore integrity demonstration

Class VI Primacy in the United States

No Known Activity										
Class I	Class II	Class III	Class IV	Class V	Class VI					
Hazardous and nonhazardous fluids (industrial and municipal wastes).	Brines and other fluids associated with oil and gas production, including CO ₂ EOR.	Fluids associated with solution mining of minerals.	Hazardous or radioactive wastes. This class is banned by EPA.	Nonhazardous fluids into or above a USDW and are typically shallow.	Injection of CO ₂ for long-term storage.

CONCLUSIONS

- Two decades of research into demonstrating safety and efficacy of CCUS.
 - Demonstrated success of monitoring techniques.
- Regulatory environment continues to develop in support of deploying CCUS.
- Incentive programs are driving current development.
 - Companies and their investors are driven to meet their own emission reduction goals.
- CCUS technology represents a key opportunity to decarbonize industry.
